

CSF9700B Coil Work Analysis Report

Ohsung Steel, Slitting Line 2 - based on PLC telemetry (plc_data)

1. Work overview

Customer	Junghyun Steel Co., Ltd.	Work date	2026-07-16
Product	CSF9700B	Specification	1.0 x 4 x C
Gross weight	12,170 kg	Used weight	12,170 kg
Slitting rule	49=24, loss=43 (shipped separately)	Process	Slitting Line 2 (SLITING2)
Note	Wound twice, 6 bundles		

2. Length by work segment

As noted on the work order ("wound twice"), the PLC LENGTH field (raw value x10 correction) plotted against time shows two distinct passes separated by an approximately 18-minute stop. Total processed length was 1,268 m: 688 m before the stop (pass 1), and the remaining 580 m after the line resumed (pass 2).

Segment	Time window	Length	Note
Pass 1	09:28 - 09:34	688 m	
Stopped	09:34 - 09:52 (approx. 18 min)	-	Line speed 0
Pass 2	09:52 - 10:02	580 m	(1,268 - 688)
Total		1,268 m	

3. Cross-check

Back-calculating length from the ERP gross weight (12,170 kg), measured width (1,270 mm), spec thickness (1.0 mm), and steel density (7.85) gives approximately 1,221 m, which is within about 4% of the PLC-measured total (1,268 m), supporting the reliability of the telemetry reading.

4. Note

A live query against plc_data for this time window currently returns no data, because the COIL_ID tag for these rows has since been reset to its default value. This report is based on a separately preserved raw CSV export (same plc_data ID range, 2,683 rows) captured at the time of the job.
